

YWLM AMD 02/25

1 Purpose

The purpose of this amendment is to detail expected adjustments in ATC procedures, this amendment supersedes YWLM AMD 01/25. 453SQN WLM FLT has temporarily relocated to BLD938 (new tower) and are executing contingency procedures in order to safely provide ATS without critical enabling equipment. This move is in response to damage to the legacy tower (BLD460).

2 Procedures

During the period that tower services are provided from BLD938 local operators can expect the following:

- Continuous CIRA operations available by prior coordination with ATC. Planning should be conducted at the weekly airspace meeting and be annotated on FPARS.
- Non-continuous CIRA operations such as IP procedures and go-around to land from a CIRA may be available on request but should not be expected.
- Increased spacing between arrivals and holding if required.
- Expect increased spacing between departures.
- A requirement to provide 10 minutes notice prior to exiting training airspace.
- An inability for ATC to manipulate arrestor systems.

5. Cancellation

This amendment will be cancelled when normal services are restored in BLD460 or this amendment is superseded.
